

BUILD READINESS CHECKLIST

Before you move to Pitch, confirm the solution works and still answers the customer.

- ☐ **CORE EXPERIENCE** The main user journey works from beginning to end.
- ☐ **DISCOVERY ALIGNMENT** What we built still addresses the problems and needs identified in Discovery.
- ☐ **SCOPE DISCIPLINE** We focused on the critical experience instead of many unfinished features.
- ☐ **REAL FUNCTIONALITY** We know what is fully working, partially working, mocked, or simulated.
- ☐ **AI BEHAVIOR** If AI is involved, we tested different inputs and understand key limitations.
- ☐ **ERROR HANDLING** We considered what happens when an input, connection, or component fails.
- ☐ **DATA & SECURITY** Demo data is appropriate and no secrets, credentials, or sensitive information are exposed.
- ☐ **DEPENDENCIES** Required APIs, services, environments, and connections are working.
- ☐ **DEMO PATH** We know the exact flow we will show and which team member owns each part.
- ☐ **BACKUP PLAN** We have a fallback for critical demo moments if a live dependency fails.

CUSTOMER CONCERN → SOLUTION MAPPING
Trace what you built back to what the customer told you.

Go back to your Discovery notes. For every major customer concern, identify exactly where your solution addresses it.
If a concern is intentionally out of scope, say so.

#	CUSTOMER CONCERN / NEED	PART OF THE SOLUTION THAT ADDRESSES IT	COVERED?

BUILD WITH TRACEABILITY
Every major capability should have a clear reason for existing, grounded in a customer need.
